

USDA, Wildlife Services: Rabies Research in Northeastern VT

Biologists will be live trapping rabies vector species along State and Town roads in the Northeast Kingdom during the summer and fall of 2018. Biological samples will be collected and captured animals will be released unharmed with a unique ID. This effort aids Wildlife Services in monitoring the success of oral rabies vaccines used to stop the spread of rabies in wildlife.

Your participation and support of this program is critical to its success. Thank you for your cooperation.
